

When Fodder Beet is being fed, Calcium & Phosphorus Supplementation is an important consideration.

Agvance work with your vet to ensure your herd is equipped to handle winter challenges. A complete range of effective calcium and phosphate supplement options are available.

CALCIPHOS - DUSTING/GRANULAR

High quality Calcium & Phosphate supplement

- Dose through inline feed mineral dispenser, or bulk blend into feed such as PKE or DDG's (Granular)
- Dust over pasture, or through a molasses dosing system i.e. cone dose (Dusting)

SOLUPHOS

100% water-soluble, providing a highly available Phosphate to the cow

- Dose through inline dispenser system - premix with warm water in a bucket and mix until fully in solution. Then add to the dispensing unit.

MAGNESIUM PHOSPHATE (MagPhos)

The added benefit of Magnesium high palatability

- Dose over silage, through a molasses dosing system i.e. cone dose
- Alternatively blend into feed such as PKE or DDG's (must be fine feed so as not to separate in silo). Micro-prill form ensures low dust.

FODDER BEET LOOSE-LICK

Fed free-choice in the paddock of fodder beet

- One bin per 50 cows is spread-out in paddock and topped up every 1-2 days
- Intake rate varies from around 40gms up to 120gms
- Has been proven to increase blood phosphate levels
