HIGH AVAILABILITY
FOR ABSORPTION

CalciPhos Dusting Grade is a high quality Calcium and Phosphorus supplement for dairy cattle and young stock. It is designed to prevent low phosphorus and calcium levels.

- CalciPhos is a specially designed blend of both calcium and phosphate giving a perfect 2:1 ratio using products that provide the calcium and phosphate in a highly available form.
- The 2:1 calcium to phosphate ratio ensures maximum uptake and storage of both calcium and phosphate. This achieves the best result in the animal, both short and long-term.
- CalciPhos Dusting Grade is designed to be dusted over pasture, or through a molasses dosing system i.e. cone dose.

Note: CalciPhos is also available in a granular form - refer CalciPhos Granular brochure for product details.

TECHNICAL INFORMATION

This product is typically used when grazing Fodder Beet in the Autumn/late lactation and in the Spring/early lactation. This product will often be used alongside or instead of the other Phosphate products such as Fodder Beet Loose-lick, MagPhos (Magnesium Phosphate) and SoluPhos.

Mixing Instructions

It is suitable for dusting over pasture, dusting of silage or mixing with water as a slurry and pouring over silage or baelage.

Daily Dose Rate

50-100 gms / cow / day.

To be dosed by dusting over pasture or by means of a molasses dosing system i.e. a cone dose.

MINERAL SUPPLEMENT ELEMENT BLEND

Element	Elemental levels
	Typical Analysis Elemental %
