ABSORPTION

CalciPhos Granular is a high quality Calcium and Phosphorus supplement for dairy cattle and young stock. It is designed to prevent low phosphorus and calcium levels.

- CalciPhos is a specially designed blend of both calcium and phosphate giving a perfect 2:1 ratio using products that provide the calcium and phosphate in a highly available form.
- The 2:1 calcium to phosphate ratio ensures maximum uptake and storage of both calcium and phosphate. This achieves the best result in the animal, both short and long-term.
- CalciPhos Granular can be dosed through an inline feed mineral dispenser, or bulk blended into feed such as PKE or DDG's.

Note: CalciPhos is also available in powder form - refer CalciPhos Dusting Grade brochure for product details.

TECHNICAL INFORMATION

This product is typically used when grazing Fodder Beet in the Autumn/late lactation and in the Spring/early lactation. This product will often be used alongside or instead of the other Phosphate products such as Fodder Beet Loose-lick, MagPhos (Magnesium Phosphate) and SoluPhos.

Mixing Instructions

It is designed to be dosed onto the feed in the shed, or bulk blended with feed as it is purely in granular form.

Daily Dose Rate

50-100 gms / cow / day.

Dosed through an inline feed mineral dispenser or bulk blended into feed such as PKE or DDG's.

MINERAL SUPPLEMENT ELEMENT BLEND

Element	Elemental levels
	Typical Analysis Elemental %
Calcium	26%
Phosphate	13%
Net Bag Weight	25kg bag

Mineral levels can be custom blended to herd requirements
