Boron	48mg

Dose Rate 70g/cow/day

25kg net bag weight

*Mineral levels can be custom blended to herd requirements

PREMIUM LOOSE LICK FODDER BEET ELEMENTAL BLEND

This blend supplies levels of phosphate and calcium specifically required by cattle grazing this crop, in addition to a balanced organically based trace element blend. A simple and cost effective option.

TECHNICAL INFORMATION

Daily Dose

On-farm trials have shown cows will settle on about a 70gm/cow/day dose rate over a period of 3-4 days. This intake rate can vary, based on the weather at the time, cold and wet conditions can see a 20-40% increase and warmer dry weather can see a 20-40% decrease.

Dosing Instructions

To be fed in one 100lt container per 100 cows (use 200 ltr drums, cut in half). This container should have holes drilled in the bottom so water does not accumulate. The product should be topped up in these containers every 1-2 days.
