

Designed for lactating and dry cows, youngstock and beef cattle. Contains effective mineral levels that aid in metabolism, prevention of metabolic disease, energy utilisation, body condition and the maintenance of blood and liver mineral levels.

WHY USE A LOOSE LICK

Loose licks are a very cost efficient way of offering a general mineral blend to animals fed on pasture or forage crops. They are an easy and simple option of providing a macro mineral and trace element supplement to the herd.

PREMIUM LOOSE LICK

- Salt to balance mineral levels in crops and pasture aiding in metabolism and the prevention of metabolic disease.
- Effective Magnesium high quality magnesium used in maintaining blood magnesium levels and helping to prevent metabolic disease.
- Copper Plexomin Chelate a high quality chelate providing a high quality organic copper supplement. This helps to build / maintain copper levels in the liver and blood, and supports the health of the animal.
- Zinc maintains / boosts the immunity of the animal through times of stress (wet/cold conditions and late stages of pregnancy).
- lodine in highly available EDDI form, helps to maintain iodine levels while on goitrogenic crops. Aids metabolism and is important in preparing the cow for the calving period.
- **Selenium** supports maintenance of blood selenium levels going into the calving period.
- Chromium aids energy metabolism by helping a cow efficiently use the energy she is eating to increase body condition.

PREMIUM LOOSE LICK ELEMENTAL BLEND

Elemental levels

Element Typical Analysis Mg's per dose

Magnesium	9.2g
Sodium	5.9g
Copper Plexomin Chelate	75mg
Zinc Sulphate	500mg
Cobalt	8mg
lodine	10mg
Selenium total	4.3mg
Sodium Selenate	1.3mg
Coated Selenium	3mg
Boron	26.8mg
Chromium - Kemtrace	4mg
Phosphorus	1.4g
Chloride	12g
Sugar	1.1g
Dose Rate	50g/cow/day
2000
