COMPREHENSIVE
FORMULA

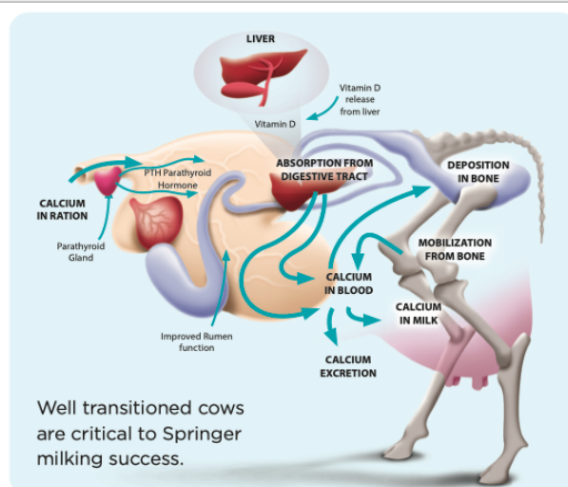

OPTIMAL
IMMUNITY

Providing a balanced diet for cows over the transition period is essential to spring success on the farm. An effective transition feeding plan helps to avoid metabolic disease, increase spring milk production and improve reproductive performance.

AGVANCE TRANSITION PREMIX

- Supports rumen function and higher levels of available energy in early lactation.
- Provides ideal ratios of calcium, magnesium, chloride and sulphur, along with key trace elements to the diet.
- Premix delivers mineral salts in negative DCAD form.

Agvance Transition Premix achieves optimum mineral levels at this critical time when the cow's requirements for them are high.

Well transitioned cows are critical to Springer milking success.

TECHNICAL INFORMATION

Daily Dose Rate

Agvance Transition Premix can be fed at 300g/cow.
