

Premium Transition Premix NI

Advantages

SUPERIOR ANIMAL HEALTH

DESIGNED FOR TRANSITION PERIOD

NEGATIVE DCAD MINERALS

COMPREHENSIVE FORMULA

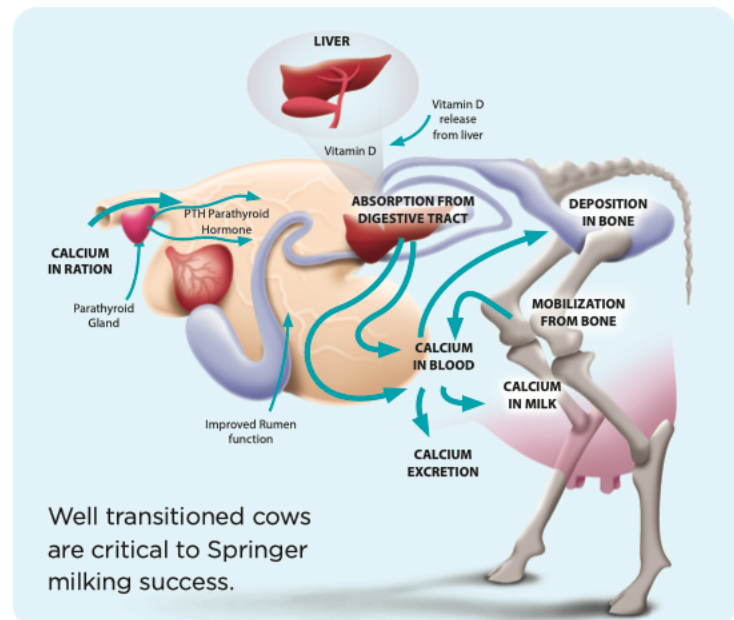

OPTIMAL IMMUNITY

Providing a balanced diet for cows over the transition period is essential to spring success on the farm. An effective transition feeding plan helps to avoid metabolic disease, increase spring milk production and improve reproductive performance.

AGVANCE TRANSITION PREMIX

- Supports rumen function and higher levels of available energy in early lactation.
- Provides ideal ratios of calcium, magnesium, chloride and sulphur, along with key trace elements to the diet.
- Premix delivers mineral salts in negative DCAD form.

Agvance Transition Premix achieves optimum mineral levels at this critical time when the cow's requirements for them are high.

TECHNICAL INFORMATION

Daily Dose Rate

Agvance Transition Premix can be fed at 300g/cow.

Dosage Methods

Mixer wagon

Feedout wagon

DAIRY COW TRACE ELEMENT BLEND

Elemental levels

Typical Analysis Mg's per dose @ 300 gms/cow/day

Element	Typical Analysis Mg's per dose @ 300 gms/cow/day
Calcium	43g
Magnesium	15g
Chloride	59g
Sulphur	28g
Cobalt	17mg
Iodine	8.7mg
Selenium Total	8mg
Coated Selenium	6mg
Sodium Selenate	2mg
Copper (Org)	140mg
Zinc (Org)	340mg
Bovatec (Lasolocid)*	300mg
Rumen Buffer	36g
Net Bag Weight	25kg
