

# Premium Milkers Premix

## Advantages

SUPERIOR  
ANIMAL  
HEALTH

DESIGNED  
FOR EARLY  
LACTATION

POSITIVE  
DCAD  
MINERALS

EASY  
TO USE

OPTIMAL  
IMMUNITY

Significant hormonal and digestive system changes are involved in producing milk. These changes put a cow under additional pressure, increasing the need for key nutrients such as calcium, magnesium and phosphorous, in order to help meet the demands of a high producing dairy cow.

## AGVANCE MILKER PREMIX

- Once the cow begins to lactate, the focus must change to supplying a strongly positive DCAD diet.
- A diet high in DCAD has been shown to assist good rumen function and therefore drive production.
- Agvance Lactation Premix delivers a comprehensive mineral formulation, high in calcium, magnesium & phosphorous, to support the cow throughout lactation. This is especially important when cows are feeding on a supplementary feed such as maize.

## TECHNICAL INFORMATION

### Daily Dose Rate

Agvance Milker Premix can be fed at 240g/cow.

### Dosage Methods

Mixer  
wagon

Feedout  
wagon

## DAIRY COW TRACE ELEMENT BLEND

### Elemental levels

Typical Analysis Mg's  
per dose @  
240 gms/cow/day

### Element

Calcium	51.9g
Magnesium	21.9g
Phosphorus	3.3g
Sodium	11.6g
Chloride	17.8g
Sulphur	9.8g
Zinc	1,012.4mg
Cobalt	16.1mg
Iodine	21mg
Boron	53.3mg
Manganese	75.8mg
<b>Selenium Total</b>	<b>8.5mg</b>
Coated Selenium	6mg
Sodium Selenate	2.5mg
Copper (Org)	151.8mg
Chromium (Org)	8mg
Bovatec (Lasolocid)*	300mg
<b>Net Bag Weight</b>	<b>25kg</b>
