

Premium Standard Loose Lick

Designed for lactating and dry cows, youngstock and beef cattle. Contains effective mineral levels that aid in metabolism, prevention of metabolic disease, energy utilisation, body condition and the maintenance of blood and liver mineral levels.

WHY USE A LOOSE LICK

Loose licks are a very cost efficient way of offering a general mineral blend to animals fed on pasture or forage crops. They are an easy and simple option of providing a macro mineral and trace element supplement to the herd.

PREMIUM LOOSE LICK

- **Salt** - to balance mineral levels in crops and pasture aiding in metabolism and the prevention of metabolic disease.
- **Effective Magnesium** - high quality magnesium used in maintaining blood magnesium levels and helping to prevent metabolic disease.
- **Copper Plexomin Chelate** - a high quality chelate providing a high quality organic copper supplement. This helps to build / maintain copper levels in the liver and blood, and supports the health of the animal.
- **Zinc** - maintains / boosts the immunity of the animal through times of stress (wet/cold conditions and late stages of pregnancy).
- **Iodine** - in highly available EDDI form, helps to maintain iodine levels while on goitrogenic crops. Aids metabolism and is important in preparing the cow for the calving period.
- **Selenium** - supports maintenance of blood selenium levels going into the calving period.
- **Chromium** - aids energy metabolism by helping a cow efficiently use the energy she is eating to increase body condition.

PREMIUM LOOSE LICK ELEMENTAL BLEND

Element	Elemental levels Typical Analysis Mg's per dose
Magnesium	9g
Sodium	11.5g
Copper Plexomin Chelate	75mg
Zinc Sulphate	420mg
Cobalt	6.8g
Iodine	6.7mg
Selenium total	5.6mg
<i>Sodium Selenate</i>	<i>2.3mg</i>
<i>Coated Selenium</i>	<i>3.3mg</i>
Boron	45mg
Chromium - Kemtrace	44mg
Sugar	1.2g
Chloride	17g

Includes Molasses

Dose Rate

50g/cow/day

25kg net bag weight
